PPC blue: European Funding to install fast-charging points

- *For easy access to a reliable network of publicly accessible speed chargers*

PPC secured European funding, through the Connecting Europe Facility (CEF), for the further development of the PPC blue public charging network (HPDC). Within the framework of the project 21-EL-TC-ESEERT "Electrifying South East Europe Road Transport", PPC blue is proceeding with the installation and operation of a total of 34 fast charging points in 2 x 150 kW charging stations, with a total capacity of up to 300 kW.

The new PPC blue superchargers will be installed in 13 areas nationwide, enhancing the presence, quality, and coverage of the PPC blue electric car charging network on key roads in the country. With energy derived exclusively from renewable sources, the new PPC blue fast charging points will be easily accessible to people with disabilities, whose service will be prioritized.

With the addition of the new high-power fast chargers at key points of the Greek road network, PPC blue significantly strengthens its nationwide public network of fast chargers, which lists more than 200 points (DC), of which 36 are high-power fast charging points up to 300 kW (HPDC), thus facilitating journeys with electric cars.

Kyriakos Kofinas, PPC's General Manager on e-mobility, said: *"The electrification bet is a national bet and PPC blue is a key player in developing the infrastructure and applications that lead to its achievement. Heading towards this direction, we are contracting with the Connecting Europe Facility, and together we are investing in the rapid deployment of fast charging, at key hubs throughout Greece. The growth of green mobility for a more sustainable future is a shared goal and we are planning to achieve it through synergies and cooperation."*

PPC blue: the wonderful world of electromobility

PPC, as an energy leader, responding to its commitment to sustainable development and environmental protection, acknowledged its role in the penetration and development of electrification in the country. With the PPC blue brand as its vehicle, it offers integrated services making electromobility affordable and accessible to all through its network of chargers, with a total of over 200 fast charging points. PPC continues to invest, constantly adding
