

ANNOUNCEMENT

PPC S.A. announces that, due to the increased inflows in the reservoirs of the Hydro Power Plants (HPP), which resulted from the increased rainfalls during the recent days, in combination with the already high water reserves, it is necessary to take immediate measures for the security of the dams, the avoidance of flooding, etc.

For this reason, PPC has to substantially increase its hydro generation over the next period.

In order to proceed with the necessary increased participation of the Hydro Power Plants in the National Interconnected System, PPC will collaborate with the Hellenic Transmission System Operator (HTSO), in accordance with the relevant Codes of the System Operation and Electricity Transactions.

The following table depicts comparative data of inflows and water levels in PPC reservoirs:

MONTH	2008		2009		2010	
	INFLOWS (GWH)	RESERVES (GWH)	INFLOWS (GWH)	RESERVES (GWH)	INFLOWS (GWH)	RESERVES (GWH)
SEPTEMBER	44	950	61	1.906	88	2.019
OCTOBER	138	989	305	1.857	484	2.007
NOVEMBER (1-29)	159	1.041	620	1.874	899	2.279
